

Why primes are interesting

Prime numbers are integers that have no other factor than themselves, or one.

Prime numbers are the 'building blocks' of all other integers, since any integer can be expressed in terms of prime factors. This is a very useful process for simplifying divisions, working out lowest common multiples, highest common factors etc.

But prime numbers are also mysterious. There is no known formula for predicting the n^{th} prime number! Since algorithms involving the product of two large primes is the basis of **RSA cryptography** that is used extensively for secure internet connections, this feature of prime numbers helps maintain our security.

The distribution of primes follows a fairly random pattern, which can be seen by plotting a **Ulam spiral** or **number spiral plot**. Or simply a grid with the primes coloured.

Mersenne Primes are of the form: $M_p = 2^p - 1$ = 3, 7, 31, 127, 8191, 131071, 524287 ...

where p is also prime.

Note not all primes p will result in a Mersenne prime.

$$2^{11} - 1 = 23 \times 89$$

Perfect numbers can be found from the formula (which has a Mersenne prime factor)

$$P_p = 2^{p-1} (2^p - 1) \quad p = 2, 3, 5, 7, 13, 17, 19, 31, 61, 89, 107, 127, \dots$$

Perfect numbers are numbers where the sum of all possible factors (excluding the number itself) = the number.

PERFECT #1: $2^1 * (2^2 - 1) = 6 = 1+2+3$
 PERFECT #2: $2^2 * (2^3 - 1) = 28 = 1+2+4+7+14$
 PERFECT #3: $2^4 * (2^5 - 1) = 496 = 1+2+4+8+16+31+62+124+248$
 PERFECT #4: $2^6 * (2^7 - 1) = 8128 = 1+2+4+8+16+32+64+127+254+508+1016+2032+4064$
 PERFECT #5: $2^{12} * (2^{13} - 1) = 33550336 = 1+2+4+8+16+32+64+128+256+512+1024+2048+4096+8191+16382+32764+65528+131056+262112+524224+1048448+2096896+4193792+8387584+16775168$

At the time of writing, only 47 Perfect numbers have been found. And all of these are even ...

First fifty million primes!

<https://primes.utm.edu/lists/small/millions/>

- 1 is ODD, is a SQUARE, is a CUBE, and prime factors are 1
- 2 is EVEN, is PRIME and generates MERSENNE PRIME $2^2 - 1 = 3$
- 3 is ODD, is a MERSENNE PRIME and generates MERSENNE PRIME $2^3 - 1 = 7$
- 4 is EVEN, is a SQUARE, and prime factors are 2×2
- 5 is ODD, is PRIME and generates MERSENNE PRIME $2^5 - 1 = 31$
- 6 is EVEN, and prime factors are 2×3 . *PERFECT*
- 7 is ODD, is a MERSENNE PRIME and generates MERSENNE PRIME $2^7 - 1 = 127$
- 8 is EVEN, is a CUBE, and prime factors are $2 \times 2 \times 2$
- 9 is ODD, is a SQUARE, and prime factors are 3×3
- 10 is EVEN, and prime factors are 2×5

$$\frac{4321}{5678} = \frac{29 \times 149}{2 \times 17 \times 167}$$

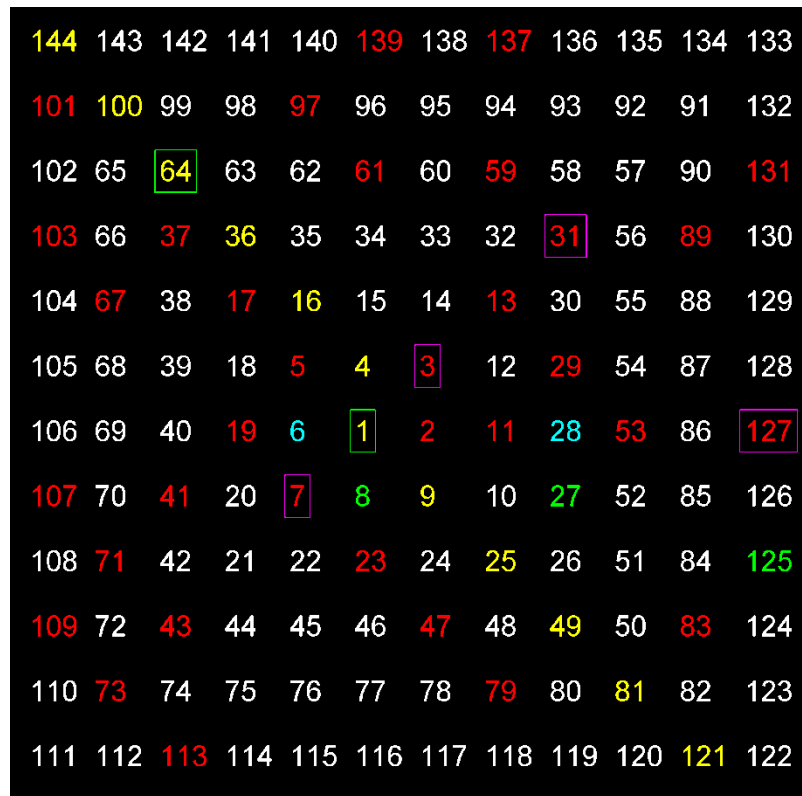

This can't be simplified since both numerator and denominator have no common prime factors

$$\frac{3210}{642} = \frac{2 \times 3 \times 5 \times 107}{2 \times 3 \times 107} = 5$$

This fraction can be simplified since common factors of $2 \times 3 \times 107$

First 1,000,000 primes

1 is ODD, is a SQUARE, is a CUBE, and prime factors are 1
2 is EVEN, is PRIME and generates MERSENNE PRIME $2^2 - 1 = 3$
3 is ODD, is a MERSENNE PRIME and generates MERSENNE PRIME $2^3 - 1 = 7$
4 is EVEN, is a SQUARE, and prime factors are 2×2
5 is ODD, is PRIME and generates MERSENNE PRIME $2^5 - 1 = 31$
6 is EVEN, and prime factors are 2×3 . *PERFECT*
7 is ODD, is a MERSENNE PRIME and generates MERSENNE PRIME $2^7 - 1 = 127$
8 is EVEN, is a CUBE, and prime factors are $2 \times 2 \times 2$
9 is ODD, is a SQUARE, and prime factors are 3×3
10 is EVEN, and prime factors are 2×5
11 is ODD, is PRIME
12 is EVEN, and prime factors are $2 \times 2 \times 3$
13 is ODD, is PRIME and generates MERSENNE PRIME $2^{13} - 1 = 8191$
14 is EVEN, and prime factors are 2×7
15 is ODD, and prime factors are 3×5
16 is EVEN, is a SQUARE, and prime factors are $2 \times 2 \times 2 \times 2$
17 is ODD, is PRIME and generates MERSENNE PRIME $2^{17} - 1 = 131071$
18 is EVEN, and prime factors are $2 \times 3 \times 3$
19 is ODD, is PRIME and generates MERSENNE PRIME $2^{19} - 1 = 524287$
20 is EVEN, and prime factors are $2 \times 2 \times 5$
21 is ODD, and prime factors are 3×7
22 is EVEN, and prime factors are 2×11
23 is ODD, is PRIME
24 is EVEN, and prime factors are $2 \times 2 \times 2 \times 3$
25 is ODD, is a SQUARE, and prime factors are 5×5
26 is EVEN, and prime factors are 2×13
27 is ODD, is a CUBE, and prime factors are $3 \times 3 \times 3$
28 is EVEN, and prime factors are $2 \times 2 \times 7$. *PERFECT*
29 is ODD, is PRIME
30 is EVEN, and prime factors are $2 \times 3 \times 5$
31 is ODD, is a MERSENNE PRIME and generates MERSENNE PRIME $2^{31} - 1 = 2147483647$
32 is EVEN, and prime factors are $2 \times 2 \times 2 \times 2 \times 2$
33 is ODD, and prime factors are 3×11
